Summary

The most significant incidents involved McKesson Corporation in the United States, Chaoxin Xuexitong in China, CAPES in Brazil, POSTEL/KOMDIGI in Indonesia, Sharda University in India, and Pastee in the United States. These events included data breaches linked to PwnForums, DarkForums, and BreachForums. A total of 264 incidents were recorded across 6 sources during the report period. Sixty-four incidents named a victim organization, with 23 countries and 12 sectors identified. The severity included 25 critical, 22 high, 49 medium, and 168 low. The United States was the most targeted country with 18 incidents.

Written on this Mac by Apple Intelligence from the figures below; check before publishing.

- 264 incidents from 6 sources: Dark web forum monitoring 232, Ransomware leak-site tracker 14, Vulnerability database 11, Security news 4, Breach notification service 2, Threat intelligence community 1.
- Severity: 25 critical, 22 high, 49 medium, 168 low.
- 64 incidents name a victim organization; 23 countries and 12 sectors are named.
- 83 incidents state a record count (claimed, not verified); the largest is 50B (#197).
- 11 CVEs mentioned; 0 in the CISA KEV catalog (exploited in the wild); highest EPSS not available.
- 0 links between sources; 64 possible reposts (still counted as separate incidents).
- 22 named victims had already appeared in earlier reports (returning victims).
- Indicators: 250 URLs, 285 domains, 22 .onion sites, 3 IP addresses, 4 e-mail addresses, 6 MD5 hashes, 3 SHA-1 hashes, 3 SHA-256 hashes, 11 CVEs; all of them, defanged, are in the CSV file that comes with this report.
- Incomplete days (saved before the day ended): Nov 11 (Breach notification service until 12:18, Dark web forum monitoring until 12:19, Open source vulnerability advisories until 12:18, Ransomware leak-site tracker until 12:18, Security news until 12:18, Threat intelligence community until 12:19, Vulnerability database until 12:18, Vulnerability database until 12:18).
- Compared with 10 November 2026: 264.0 incidents a day, against 271.0 (–3%); 80 actors not seen then.

Active: Nov 11 · Ransomware 7
Named victims: MKG Bremen, Audio Note UK Ltd Information, NUCO Controls, Aviation Cargo Handling ExpAirts GmbH, Methodist Hospitals in Northwest Indiana, New Braunfels Vision Center, Herald Christian Health Center
Countries: Germany, United Kingdom, United States
Not seen in 10 November 2026.
Incidents: #42, #43, #44, #45, #46, #47, #48

CVE priority

Ordered by: listed in CISA KEV (exploited in the wild), then exploited according to SSVC, then public exploit code, then EPSS (probability of exploitation in the next 30 days), then CVSS.

CVE-2026-126187 not in KEV · public exploit · no EPSS yet · CVSS 9.5 · #248
CVE-2026-64678 not in KEV · no public exploit · no EPSS yet · CVSS 9.8 · #81
CVE-2026-64682 not in KEV · no public exploit · no EPSS yet · CVSS 9.8 · #82
CVE-2026-89324 not in KEV · no public exploit · no EPSS yet · CVSS 9.8 · #255
CVE-2026-121904 not in KEV · no public exploit · no EPSS yet · CVSS 9.6 · #258
CVE-2026-126542 not in KEV · no public exploit · no EPSS yet · CVSS 9.3 · #155
CVE-2026-64670 not in KEV · no public exploit · no EPSS yet · CVSS 9.3 · #89
CVE-2026-126539 not in KEV · no public exploit · no EPSS yet · CVSS 9.2 · #156
CVE-2026-121355 not in KEV · no public exploit · no EPSS yet · CVSS 9.1 · #259
CVE-2026-82391 not in KEV · no public exploit · no EPSS yet · CVSS 9.1 · #262
CVE-2026-126261 not in KEV · no public exploit · no EPSS yet · CVSS 9.0 · #253

CISA KEV catalog 2026.11.09: 1,773 vulnerabilities known to be exploited.
EPSS: 0 of 11 CVEs scored. A CVE published today usually gets its first score the next day.
SSVC decisions (exploitation, automatable, technical impact): 0 of 11 CVEs have one.
Public exploit code: 1 of 11 CVEs have a published exploit or a proof-of-concept repository (checked once a day).

Possible reposts

The same offer can be posted on several forums or posted again. These are marked, not removed: they may still be different data.

Incidents

#1 [Data Breach] National Public Data 2.7 billion-record USA SSN database offered for sale via Telegram

CRITICAL

Date: 2026-11-11 12:13
Actors: joss1232
Victim: National Public Data
Sector: Data Brokerage
Forum: BreachForums (breached[.]hn, BF3)
Network: openweb
Source type: Dark web forum monitoring
Data type: Personal Data
Country: USA
Victim site: nationalpublicdata[.]com
Board: Databases
UUID: fa1c59de-d8b0-4b0b-b87e-c1bcecf90ae3

Actor profile — Rank: Member · Reputation: 0 · Posts: 2 · Threads: 1 · Joined: Nov 2026

Preview: The actor offers the National Public Data (NPD) dataset, claimed to hold 2.7 billion USA records including Social Security Numbers. The file is said to be split into 50-million-record parts hosted on Telegram, with delivery promised within 5 minutes of a DM order to the listed Telegram contact.

#13 [Threat Campaign] Analysis of Wpcdoor Attack Case Distributed Through Domestic DVR Management Software

MEDIUM

Date: 2026-11-11 11:55
Actors: Larva-26013

Source type: Threat intelligence community
UUID: 6af43b7618f6962a478a6835

Description: A South Korean company's DVR management software (CMS) was exploited to distribute the Wpcdoor backdoor malware. The attack chain begins when CMS.exe installs rs.win32.exe along with a malicious IPHLPAPI.DLL file that loads via DLL side-loading. This first-stage downloader retrieves WpcMon.exe and samcli.dll, which acts as a second-stage downloader executing the Wpcdoor backdoor in memory. Wpcdoor exfiltrates system information including screenshots, clipboard data, browser credentials, wallet extension data, and supports various commands for remote control. The backdoor targets cryptocurrency wallets including MetaMask, Coinbase, and Phantom. The attacker, designated as Larva-26013, continues to deploy Wpcdoor through multiple attack vectors beyond the DVR software compromise.

#17 [Ransomware] Tyfone (Aoqin)

HIGH

Date: 2026-11-11 11:51
Actors: Aoqin
Country: USA
UUID: VHlmb25lQEFvcWlu
Source type: Ransomware leak-site tracker
Victim: Tyfone
Sector: Technology

Description: Founded in 2004 by Siva Narendra, Prabhakar Tadepalli and Tom Spitzer, under the premise “We believe in the power of the digitally connected world, but one needs digital trust for the connected world to become increasingly valuable.” We first applied this concept to the world of mobile banking transactions when smartphones were anticipated to gain traction. Our early work was done with the likes of Google, First Data, and the Department of Defense, focused on conveniently securing the identity of a digital user to enable transactions such as mobile payments. We had recognized our calling to secure online banking for the everyday consumer. Working alongside a handful of innovative credit unions (including two $10B in assets) tyfone launched our mobile banking platform. Leveraging our knowledge of convenience and user experience coupled with strong security, we relied on the expertise of our partners to bring our first iteration of mobile banking to life. A decade later, we threw the proverbial hand grenade at our “mobile only “solution and rebuilt our platform from scratch to be a modern, scalable, omnichannel solution that provides online banking services on any device, for both our retail banking customers and business banking clients. The new platform considers that user experience is critical for consumers as well as employees of our customers. Our solution envisions innovation in digital services as consumer digital interactions evolve (AI, augmented reality, virtual branches). Tyfone’s founding team members are inventors with more than 130 patents including several in financial services, that by themselves have attracted tens of million dollars in investments. Status: Not paid. Data publication: 2026-11-19 09:14 UTC. Revenue: $44M. Employees: 200. Data type: Contracts, banking, clientsData, personal.

#81 [Critical CVE] CVE-2026-64678: NOsql Object (NO2 a.k.a Nitrite) database is an open source nosql embedded document store. Prior to version...

MEDIUM

Date: 2026-11-11 06:07
UUID: CVE-2026-64678
Source type: Vulnerability database

Description: NOsql Object (NO2 a.k.a Nitrite) database is an open source nosql embedded document store. Prior to version 4.4.1, when Nitrite opens a database file, MVStoreUtils.openOrCreate() automatically checks for a legacy v1-format store and, on detecting one (or hitting a compatibility error while opening), triggers an automatic migration path. This path deserializes stored values using NitriteDataType.deserialize(byte[]), which passes the raw bytes directly to java[.]io.ObjectInputStream.readObject() via a custom NitriteObjectInputStream subclass. That subclass overrides only readClassDescriptor() — solely to remap a handful of known legacy class names to their current equivalents — and implements no class allowlist, blocklist, or ObjectInputFilter (JEP 290). Any Serializable class reachable on the embedding application's classpath can therefore be instantiated via readObject(), with readObject()/readExternal()/readResolve() callbacks invoked unconditionally. If a suitable gadget class (e.g. from commons-collections or similar) happens to be present on the classpath, this is a precondition for remote code execution. This issue has been patched in version 4.4.1.

Other — affected_products: nitrite-java < 4.4.1 · aliases: CVE-2026-64678 · assigner: GitHub_M · cvss_score: 9.8 · cvss_vector: CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:H · vendor: nitrite

MEDIUM

Date: 2026-11-11 06:04
UUID: CVE-2026-64682
Source type: Vulnerability database

Description: AstroBlocks is a block-first CMS for Astro projects. Prior to version 3.4.0, admin session tokens can be forged due to a hard-coded fallback JWT secret and a mismatched environment variable name. An attacker who knows the public fallback value (readable in the published package) can forge a valid session token with role: "owner" and obtain full administrative control of the CMS — creating/deleting content, users, media, redirects, and configuration. This issue has been patched in version 3.4.0.

Other — affected_products: astro-blocks < 3.4.0 · aliases: CVE-2026-64682 · assigner: GitHub_M · cvss_score: 9.8 · cvss_vector: CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:H · vendor: NauelG

MEDIUM

Date: 2026-11-11 05:42
UUID: CVE-2026-64670
Source type: Vulnerability database

Description: Waline is a comment system with backend support. In versions 3.15.2 and prior, @waline/client renders the comment editor's live preview with marked and no sanitizer (utils/markdown.ts), and the preview is injected with v-html. When a comment is edited, the editor is seeded with the comment's raw, un-sanitized body (orig). Only administrators and the comment owner can edit. So an administrator who clicks Edit on an attacker's comment renders that attacker's raw HTML in their own session: an unauthenticated commenter achieves privilege-escalation stored XSS against a moderator with a single Edit click. At time of publication, there are no publicly available patches.
Other — affected_products: waline ≤ 3.15.2 · aliases: CVE-2026-64670 · assigner: GitHub_M · cvss_score: 9.3 · cvss_vector: CVSS:3.1/AV:N/AC:L/PR:N/UI:R/S:C/C:H/I:H/A:N · vendor: walinejs
Severity: Medium (score 35: Critical CVE · CVSS 9.3)
CVE-2026-64670: not in CISA KEV · no EPSS score yet · no public exploit found

#155 [Critical CVE] CVE-2026-126542: WWBN AVideo 6.5 through 29.7.1 contains an authentication bypass vulnerability that allows unauthenticated...

MEDIUM

Date: 2026-11-11 02:58
UUID: CVE-2026-126542
Source type: Vulnerability database

Description: WWBN AVideo 6.5 through 29.7.1 contains an authentication bypass vulnerability that allows unauthenticated attackers to log in as any user via Hybridauth social login display names. Attackers can set their X, Facebook, Yahoo or LinkedIn display name to a victim's username and withhold email, causing login.json.php or oauth2.php to log them in as that account, including administrators, without a password.

Other — affected_products: AVideo 6.5 ≤29.7.1 · aliases: CVE-2026-126542, GHSA-r23m-jf94-h653 · assigner: VulnCheck · cvss_score: 9.3 · cvss_vector: CVSS:4.0/AV:N/AC:L/AT:N/PR:N/UI:N/VC:H/VI:H/VA:H/SC:N/SI:N/SA:N · vendor: WWBN

MEDIUM

Date: 2026-11-11 02:58
UUID: CVE-2026-126539
Source type: Vulnerability database

Description: Directus before 12.1.0 contains an authorization bypass vulnerability that allows unauthenticated attackers to skip permission checks by sending a failed auth message on public-mode WebSocket connections. Attackers can send an invalid token so handleAuthRequest sets accountability to null, then read, create, update or delete records in any user-defined collection.

Other — affected_products: directus 0 <12.1.0 · aliases: GHSA-mgp5-77q8-6g32, CVE-2026-126539 · assigner: VulnCheck · cvss_score: 9.2 · cvss_vector: CVSS:4.0/AV:N/AC:H/AT:P/PR:N/UI:N/VC:H/VI:H/VA:H/SC:N/SI:N/SA:N · vendor: directus

Severity: Medium (score 35: Critical CVE · CVSS 9.2)

CVE-2026-126539: not in CISA KEV · no EPSS score yet · no public exploit found

Source type: Ransomware leak-site tracker
Victim: Garden Valley School Division
Sector: Education
UUID: R2FyZGVulFZhbGxleSBTY2hvb2wgRGl2aXNpb25AaW50ZXJsb2Nr

Description: Garden Valley School District is a Manitoba public school district with a student population of approximately 4,300. Their negligent attitude toward their own and their students' safety has resulted in the compromise of confidential student, staff, and health information, including student information system databases (names, dates of birth, grades, attendance, disciplinary and special education records), employee payroll records and bank account information, employee personnel files, accounting spreadsheets, student and staff data files, and district administrative records. This breach of information will result in a FIPPA/PHIA, notification to affected individuals, and potential penalties for violation.

#248 [Critical CVE] CVE-2026-126187: React is a JavaScript library for building user interfaces. From 19.0.0 until 19.0.9, 19.1.10, 19.2.9, and...

MEDIUM

Date: 2026-11-11 00:33
UUID: CVE-2026-126187
Source type: Vulnerability database

Description: React is a JavaScript library for building user interfaces. From 19.0.0 until 19.0.9, 19.1.10, 19.2.9, and 19.3.1, the react-server-dom-webpack, react-server-dom-parcel, and react-server-dom-turbopack packages are vulnerable to unauthenticated remote code execution through crafted payloads targeting frameworks that support React Server Components. The vulnerability only affects extremely rare cases where responses transport multiple typed arrays and an attacker-controlled value. Applications whose React code does not use a server are not affected. Applications that do not use a framework, bundler, or bundler plugin that supports React Server Components are not affected. This issue is fixed in versions 19.0.9, 19.1.10, 19.2.9, and 19.3.1.

Other — affected_products: React 19.3.0, < 19.3.1; React 19.1.0, < 19.1.10; React 19.2.0, < 19.2.9; React 19.0.0, < 19.0.9 · aliases: CVE-2026-126187, GHSA-xqc2-xf4c-x3h3 · assigner: GitHub_M · cvss_score: 9.5 · cvss_vector: CVSS:4.0/AV:N/AC:L/AT:P/PR:N/UI:N/VC:H/VI:H/VA:H/SC:H/SI:H/SA:N · vendor: react, @clerk

#255 [Critical CVE] CVE-2026-89324: The Basel Post Types plugin for WordPress is vulnerable to Authentication Bypass in all versions up to, and in...

MEDIUM

Date: 2026-11-11 00:21
Source type: Vulnerability database
UUID: CVE-2026-89324

Description: The Basel Post Types plugin for WordPress is vulnerable to Authentication Bypass in all versions up to, and including, 1.18. The vulnerability exists because a missing-quotes coding error in the defined() call for SECURE_AUTH_SALT inside BASEL_Auth::get_config() causes PHP to evaluate the constant's value rather than its name, making the check always fail and permanently falling back to the static hardcoded salt 2NlBUibcszrVtNmDnxqDbwCOpLWq91eatIz6O1O that is publicly visible in the theme source code; because this salt is static and known, an attacker can compute a valid Opauth signature entirely offline and submit a forged ?opauth callback to the unauthenticated init hook endpoint processed by register_or_login. This makes it possible for unauthenticated attackers to authenticate as any existing WordPress user, including administrators, by forging a callback tied to a known target account email address — bypassing all password verification, multi-factor authentication, and ownership checks, and receiving a fully authenticated session cookie via wc_set_customer_auth_cookie(). Exploitation requires WooCommerce to be active and at least one Basel social-login provider (Facebook, Google, or VKontakte) to be configured with a valid app_id and app_secret in the theme settings.

#262 [Critical CVE] CVE-2026-82391: The HTTP/2 front-end of the Zephyr HTTP server aliased connection receive state as a scratch output. In...

MEDIUM

Date: 2026-11-11 00:07
Source type: Vulnerability database
UUID: CVE-2026-82391

Description: The HTTP/2 front-end of the Zephyr HTTP server aliased connection receive state as a scratch output. In subsys/net/lib/http/http_server_http2.c, handle_http2_static_fs_resource() passed &client->data_len as the file_size out-parameter of http_server_find_file(). client->data_len is the count of unprocessed bytes remaining in the fixed-size per-connection receive buffer client->buffer[CONFIG_HTTP_SERVER_CLIENT_BUFFER_SIZE] (256 bytes by default), an invariant every frame handler and the socket receive path rely on. Serving any static file therefore replaced that bounded value with the file's on-disk size, and nothing resets it afterwards.

The defect is reached by an unauthenticated HTTP/2 GET for any file under the web root, in applications that register a static-filesystem resource (HTTP_RESOURCE_TYPE_STATIC_FS) with CONFIG_FILE_SYSTEM=y; CONFIG_HTTP_SERVER_VERSION_2 is enabled by default and no TLS or credentials are required on this path. Once client->data_len exceeds the buffer size, the frame dispatch loop in subsys/net/lib/http/http_server_core.c keeps parsing past the end of the received data, and the peer controls the bytes at client->cursor, so it can choose which fabricated frame the state machine consumes next by appending bytes after its request.

The inflated length defeats the only guards on the buffer. parse_http_frame_header() and the per-frame handlers read and skip up to a 24-bit frame length beyond the buffer (out-of-bounds read); the compaction memmove(client->buffer, client->cursor, client->data_len) at the end of request handling copies the file-size number of bytes into the 256-byte buffer, overflowing the rest of struct http_client_ctx — including the current_detail/current_stream pointers, the parser_settings function-pointer table and the inactivity_timer work handler — and the adjacent client contexts in static memory; and the

subsequent zsock_recv(client->fd, client->buffer + client->data_len, sizeof(client->buffer) - client->data_len, 0) underflows its size argument, writing attacker-supplied data of attacker-chosen length out of bounds.

The impact is remote memory corruption in the server's single address space: at minimum a crash or hang of the device, and plausibly control-data overwrite leading to code execution. The HTTP/1 and HTTP/3 static-filesystem handlers already used a local variable and are unaffected; the fix makes the HTTP/2 handler use a local size_t file_size as well.

Other — affected_products: Zephyr 4.0.0 <4.3.2; Zephyr 4.4.0 <4.5.0 · aliases: CVE-2026-82391 · assigner: zephyr · cvss_score: 9.1 · cvss_vector: CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:H/A:H · vendor: zephyrproject, zephyrproject-rtos
